

Appln No. 09/838,695

Amdt date October 4, 2004

Reply to Office action of July 2, 2004

**Amendments to the Specification:**

Please replace the paragraph beginning on page 1, line 27 and ending at page 2, line 3 of the specification with the paragraph shown below:

In general, each of the one or more overlapping, often rectangular, windows acts like a separate terminal, and the user is ~~enable~~able to perform different tasks in each window. The computer operating system employs one form of HCI, namely, a graphical user interface (GUI) to permit the user to take advantage of the computer's graphics capabilities to make a program easy to use. Indeed, a well-designed GUI manages windows in a manner that frees the user from learning complex command languages, and allows the user to interact with the data, files, system, and programs in an intuitive manner.
